R&D TAX CREDIT

Foundry and Metal Castings

Black Line Group is committed to your success by helping reduce your tax liability. Many companies are unaware the government is offering a generous incentive to those that qualify. The incentive is the Research and Development (R&D) Tax Credit. Black Line Group will facilitate the process to help make your business more competitive, grow faster and be more profitable.

Black Line Group understands manufacturing

With over 40 years of shop floor, living in the trenches experience, we have the practical hands-on knowledge to understand and uncover all allowable R&D credits. We will not claim a credit we cannot defend. At the conclusion of the study, we provide a robust deliverable detailing the results.

What activities qualify for R&D Tax Credits?

The definition of R&D activities is much broader than most people realize. Manufacturers of all kinds often believe they do not qualify because they are manufacturing products for their customers who provide prints and specifications. Examples may include the following:

- Designing new innovative processes
- Designing and building new molds
- Developing improvements to the molding line
- Developing or improving automation of furnace charging systems
- Developing new materials and manufacturing methods
- Activities related to prototypes and first articles for validation
- Testing and validation to satisfy regulatory requirements
- Prototyping
- Developing or improving cell manufacturing
- Experimentation to increased product yield/decreased cycle times
- Improving product quality or manufacturing processes

Focus - Integrity - Collaboration - Delight

We look forward to helping you potentially offset your state and federal tax liabilities with R&D Tax Credits. Let's start with a conversation today.
