R&D TAX CREDIT FURNITURE AND CABINET MAKING

Black Line Group is passionately committed to your success by helping reduce your tax liability. Many companies are unaware the government is offering a generous incentive to those that qualify. The incentive is the Research and Development (R&D) Tax Credit. Black Line Group will facilitate the process to help make your business more competitive, grow faster and be more profitable.

Black Line Group understands manufacturing

With over 40 years of shop floor, living in the trenches experience, we have the practical hands-on knowledge to understand and uncover all allowable R&D credits. We will not claim a credit we cannot defend. At the conclusion of the study, we provide a robust deliverable detailing the results.

What activities qualify for R&D Tax Credits?

The definition of R&D activities is much broader than most people realize. Manufacturers of all kinds often believe they do not qualify because they are manufacturing products for their customers who provide prints and specifications. Examples may include the following:

- Designing and developing new or improved products or processes
- Developing prototypes and samples
- Researching new equipment to improve the process
- Testing coatings, fabrics, finishes for strength and durability
- Cost reducing activities
- New packaging to improve stack ability, weight and durability
- Environmental effects and longevity
- Integrating new materials to improve performance
- Streamlining manufacturing processes through automation
- Developing and implementing new / improved safety enhancements
- Developing or improving cell manufacturing

Focus - Integrity - Collaboration - Delight

We look forward to helping you potentially offset your state and federal tax liabilities with R&D Tax Credits. Let's start with a conversation today.
